

Specialists in environmental services

Protecting your assets. Protecting the environment.

Protecting your assets.
Protecting the environment.

Andel provides a range of innovative products and services to protect both the built and natural environments

Established for 25 years, Andel delivers highly cost-effective, environmental solutions to clients across the UK and internationally. With offices in West Yorkshire, County Durham and Essex, we are able to reach 95% of the UK's population within 1.5 hours. Our approach is about prevention rather than cure, which is why at Andel we carry out regular inspections and risk assessments to ascertain the potential nature of a problem, rather than jump straight to a solution.

Clients include many of the UK's leading blue chip organisations. In fact any building of note in the iconic central London skyline either operates Andel's OEM equipment or receives our services.

Some of our key clients include NHS, HM The Queen, HM Government, Oxbridge universities, all the UK clearing banks, Arriva, ISS, Vinci, Carillion, Crossrail, The British Museum, Tate Modern, NPower, The National Grid and BT.

We manufacture, install and provide services in four key specialist areas:

WATER, OIL AND GAS LEAK DETECTION

FUEL AND OIL STORAGE MAINTENANCE

INTERCEPTOR WASTE AND DRAINAGE SERVICES

FLOOD PROTECTION

Leak detection

Andel **Floodline™** is a unique, award winning, BMS-compatible water, oil and multi-gas leak detection system for uninsurable risk locations within the built environment.

Floodline™ is a true hybrid and can report to a single control panel – unlike other competitor systems that require different alarm panels for different types of detection.

The system covers all possible leak detection requirements, from stand-alone, single-zone systems, up to comprehensive multi-zone systems, with the capability to protect the largest of buildings, both old and new.

Floodline™ offers outstanding flexibility, with a range of equipment to tailor each installation to a client's precise requirements. Our new, innovative **Floodline™ Ranger** system means we can now offer even more choice to clients.

Fuel and oil storage maintenance

Working with some of the largest public and private organisations in the UK, we help clients to save money and maintain operational efficiency as well as supporting their green credentials.

BundGuard™ is a highly cost-effective, self-contained and easy-to-fit automatic pump and alarm unit which works continuously and automatically 24 hours a day, 7 days a week, 365 days a year. Using advanced circuitry and micro-controller technology, the system discriminates between oil and water, keeping oil in and expelling water from the containment area. Many thousands of Andel **BundGuard™** units are installed across the UK protecting the environment and site operators.

TankGuard RMS™ is an effective anti-theft remote monitoring system for oil tanks. Fitted with a modem and ultrasonic transmitter, it makes the task of remotely monitoring your tanks simple.

We offer a comprehensive package of 'one-stop' customer support – from site survey and inspections to equipment selection, design,

installation, certification, decommission and tank repair, gauges, alarms, pipework, bunds and treatment of the oil itself. All our engineers and inspectors are OFTEC qualified.

Interceptor waste and drainage services

Andel provides a comprehensive service for underground interceptors and related surface water drainage. Our engineers are trained to carry out their work to the highest standards, including interceptor commissioning, filter changing and confined space entry.

We inspect and certify, we carry out full drainage trace surveys and mapping (as required by the emergency services) as well as drain condition surveys using state-of-the-art technology such as camera-mounted robots and industry-leading WinCan software.

We provide a highly cost-effective and friendly service, focusing on inspection first, avoiding where possible, the use of expensive tankers if not required. We tailor the service to suit the need, we use de-watering tankers that only take away contaminants and not grey water.

Flood protection

Andel provides innovative and cost-effective flood defence and flood alert systems.

FloodDefender™ is a modular, low-cost, revolutionary perimeter flood defence and containment system, delivering long-term peace of mind. Robust, cost-effective, easy-to-install and aesthetically sympathetic, **FloodDefender™** is constructed from 100% non-porous, post-industrial plastic waste, with steel reinforcement for added strength.

FloodAlert™ is ideal for surface water flood events not covered by the Environment Agency flood warning service. A cost-effective, real-time, early local flood alert system that sends SMS alerts to give time to take evasive action to protect properties at risk. **FloodAlert™** reports to landlines, mobiles, PCs and tablets with no need for special software.

Andel manufactures, installs and provides services in four key specialist areas:

WATER, OIL AND GAS LEAK DETECTION
FUEL AND OIL STORAGE MAINTENANCE
INTERCEPTOR WASTE AND DRAINAGE
FLOOD PROTECTION

Working across all major industry sectors:

Local Authorities	Leisure
Central Government	Facilities Management
Power	Retail
Health Care	Financial Services
Education	Culture
Transport	Telecoms
